3 Restricted to Lapse and Surrender NA= Not Applicable

Name of the insurer: LIC of India**Brief details on valuation data covering its accuracy, completeness and reasonableness and how the data flows to the valuation system:**

(1) Data: Policy data is extracted from the system and reasonable checks are carried out to ensure the completeness and accuracy of data. The policy data after validation are used for valuing policy liabilities.

(2) The valuation parameters are incorporated to the system to create explicit parameter file/ valuation assumption table, in a form compatible to the system. The program for calculating reserves takes input from two files, viz. parameter file/ valuation assumption table and policy data file/ data conversion system output file.

Actuarial Assumptions and methodology for valuation of policy liabilities including significant changes during the period:

The Corporation's Life Insurance Business consists of linked and non-linked business under Individual and Group contracts. The non-linked business consists of Participating Assurance/Annuity/Pension policies and Non-participating Assurance/ Annuity/Pension/Individual Health policies with Group policies written under non-participating assurances. The linked business consists of Non-participating Assurance/Pension/Individual Health policies with a small proportion of linked assurance business written under Group contracts. Some of these policies have riders attached to them such as Critical Illness, Premium Waiver Benefit, Term Assurance and Accident Benefit, including Accidental Death & Disability Benefit.

The policy liabilities for Individual and Group policies in the books as at respective valuation dates have been determined actuarially for each policy based on applicable Acts, Regulations, Actuarial Professional Standards etc. after allowing for applicable margins for prudence. It is ensured that the reserve for each policy is at least equal to the applicable surrender value. It is also ensured that negative reserve is set to zero while determining policy liabilities. The unit liability in respect of Linked business is the total Net Asset Value of the units as on the date of valuation. The non-unit liability under the linked business is determined using the discounted cash flow method. The policy liabilities are determined based on the valuation assumptions for interest, mortality, morbidity, expenses, inflation and bonuses etc wherever applicable. The liability for Group Cash Accumulation schemes is the fund value of all such schemes at the respective valuation dates. The liability in respect of Group Insurance schemes has been arrived at as unearned risk premium based on period up to next annual renewal date.

Interest rate for valuation considers and includes variable rate of interest for future periods consistent with the models and liabilities for various products based on the assets backing the respective block of liabilities. The future reversionary bonus rates assumed are consistent with the expected future experience on investment returns and valuation rate of interest corresponding to the block of assets backing respective policy liabilities. Further, the actual reversionary bonus rates would depend upon the actual and expected future experience and determination under provisions of LIC Act, 1956 (including sections 24, 26 and 28) and other applicable provisions of insurance Act, 1938. The mortality rates used are

L-42 Valuation Basis**Quarter End: 30th Sep 2021****Name of the insurer: LIC of India**

based on the published Indian Assured Lives Mortality (2012-14) Ultimate mortality table and for annuity, IIAM (2012-15) Ultimate table duly adjusted to reflect expected experience. Morbidity rates used are based on the Critical Illness Base Table (CIBT 93, UK). Incidence rates for health plans are based on the reinsurer's incidence rates (Munich Re, RGA and Swiss Re) and these rates have been suitably modified for use. Allocation of common expenses among various lines of business is based on the Board approved expense policy of the Corporation. The expense assumptions are expressed as a percentage of premiums, or per policy, or sum assured or a combination of these. The expense inflation for valuing policy liabilities has been made consistent with the best estimate assumption. The renewal per policy expenses used for valuing individual policies vary according to the type of plan and status of the policy.

Allowance for taxation and allocation of surplus to shareholders has been made while determining policy liabilities for participating policies. Additionally, global reserves have been provided for liability including for revival of paid up policies, reinstatement of policies which have not acquired paid up value, immediate increase in expenses in case the office is closed for new business, premium waiver benefit, double accident benefit including permanent disability benefit, liability in respect of refundable extra premium and refundable double accident benefit premium, extra risk in respect of sub-standard lives, additional death strain due to COVID-19 pandemic, AIDS/HIV, incurred but not reported deaths (IBNR), catastrophe, etc.. The assumptions used for arriving at the reserves for abovementioned items are determined based on a prudent assessment of the future experiences for the outstanding durations of the policies as at the date of valuation allowing for margin for any adverse deviation. Further, in case of linked plans, where there is a guarantee at maturity, cost of such guarantee has been arrived at using stochastic methods. For plans with interest rate guarantee, the cost of interest guarantee has been provided. For plans where there are options which can be exercised by the policyholders, the most onerous option has been taken for valuing these options. Fund for Future Appropriations (FFA) has been provided in case of individual linked policies.

Various sections of Life Insurance Corporation Act 1956 have been amended vide Part III of the Finance Act, 2021 and by Gazette notification dated June 29, 2021. The provisions of Part III of the Finance Act, 2021 are effective from June 30, 2021. The Board of the Corporation, on 8th January, 2022 has approved bifurcation of the Single fund into separate Par and Non Par funds as mandated under amended section 24 of LIC Act, 1956, and the surplus distribution policy on 17th September, 2021 as required under the amended section 28 of LIC Act, 1956. The surplus distribution policy mandates the surplus distribution pattern for par policies as 95:5 for the financial year 2021-22, 92.5:7.5 for the financial years 2022-23 and 2023-24, and 90:10 from financial year 2024-25 onwards and 0:100 for non-par policies from financial year 2021-22 onwards. The same has been incorporated in valuing policy liabilities as at 30th September 2021.

The Board approved surplus distribution policy has been published on the website with link -<https://licindia.in/getattachment/Investor-Relations/Policies-and-Code-of-Conduct/Surplus-Distribution-Policy.pdf.aspx>
