L-42- Valuation Basis (Life Insurance - Individual)

A chapter on Valuation basis covering the following

a. How the policy data needed for valuation is accessed.

The policy data is extracted from policy masters maintained at branch level. The data is consolidated first at the Divisional level and then at Zonal level. The summary files are created for every zone and sent to Corporate office where they are merged after verification for purity and consistency.

b. How the valuation bases are supplied to the system

Once the valuation parameters are decided they are keyed in to the system to create explicit parameter file, in a form compatible to the system. The program for calculating reserves takes input from two files, viz. parameter file and policy da
